 Year installed: 2008

| SR 18 Issaquah/Hobart                    | No injury | Possible injury | Evident injury | Serious injury | Fatality |
|--|-----------|-----------------|----------------|----------------|----------|
| All median collisions before (60 months) | 2         | 2               | 0              | 1              | 0        |
| All median collisions after              | No data   |                 |                |                |          |
| Cross median collisions before (60)      | 0         | 0               | 0              | 0              | 0        |
| Cross median collisions after            | No data   |                 |                |                |          |

### Average annual daily traffic volume

The cable median barrier generally is located 12 to 18 feet from the edge of the westbound lanes.

This installation will not be complete until Spring 2008.
